Featuring The ((apollo)) Oak Support Range

Setting the standard since 1975

Introduction

For over 30 years, Atacama and Apollo HiFi and AV supports have been designed and made in the UK by our dedicated team of craftsmen.

Winning numerous awards and accolades, Atacama furniture is aesthetically pleasing, functional, practical and adaptable, with the latest range of Evoque bamboo based supports bringing innovative new technologies to hifi furniture design.

Apollo Oak supports share many features with the Bamboo designs, but being a more traditional furniture material allows our designers to expand the lifestyle aspect of the racks. This includes practical solutions to specific requirements like vinyl storage or, in the case of Storm 10AV, cable management.

As primary materials, Atacama's high density Bamboo and Apollo's solid Oak were chosen because of their suitability when interfacing with the supported HiFi and AV equipment. As natural materials, part of the intrinsic beauty of these woods means each module is aesthetically unique, making your chosen rack one of a kind.

The Bamboo and Oak we use are natural materials, so colour variations will be present. Do not attempt to colour match using the photography shown in this brochure. For further details about finishes, please be sure to read the "Bamboo & Oak Colour Information" section on the back page.

Evoque Reference leg component description (detailed cut out)

Virtually every part of a Evoque leg is built around performance, not just supporting the Bamboo shelves!

Designed to allow a smooth transmission of mechanical energy away from the supported electronics, each shelf leg height option incorporates a tuning weight allowing dissipating energy a free flowing exit path to the floor.

Atacama

ELITE ECO 24 REFERENCE HiFi Rack

- Next generation all 40mm solid bamboo design.
- Brass/ Zinc plated micro spike isolation spikes fitted to each shelf modules
- Inverted frostrum foot components included with base modules.
- Very high 80KG (176 lbs) load capacity per module.
- 3D-AVRDC (Three Dimensional Advanced Vected Resonance Deflection Channels) incorporated into each shelf module.
- Vinyl storage module available if required. (See sepearte product listing),

Weight Capacity 70 KG (154 lbs)

Leg Pack Information

Leg packs are identified and listed by the INNER storage height, or in the case of the shortest leg length available, as a base module. There will be some additional adjustment available via the leg spikes.

All racks should use a base module as the lowest level of storage to avoid the legs splaying and to maximize storage weight capacity. Our modular racks have leg height replacement packs available should your storage height requirement change at a later date. Most models have a extra tall (295mm-300mm depending on rack type) leg replacement option available which can be purchased separately.

IMPORTANT-Bamboo & Oak Colour Information

Bamboo and Oak are natural materials so colour, texture, grain and age will give a variable appearance to each shelf. Because of this, adding extra shelving at a later date will introduce a batch /colour tonal difference. Where possible order your rack as a complete modular support with enough levels to fulfil possible future requirements in order to minimize this variation. There may be some darkening of the wood over time. This is normal and part of the materials maturing process. Colours and bamboo/ Oak grains shown in this brochure are examples of the final finishes. Due to print limitations, studio lighting and the variability of the final look of each wood shelf, to avoid disappointment do not attempt colour matching using the photographs shown to existing furniture. Each Bamboo and Oak shelf will have its own unique grain, colour and tonal balance which is part of the intrinsic beauty of natural woods and should not be viewed or treated as a defect.

((apollo))

Setting the standard since 1975

And Introducing
Apollo Cyclone Series

Introduction

Atacama offers a wide range of British designed and manufactured speaker stands with a choice of colours, dimensions and styles to satisfy most requirements.

The Apollo Cyclone series speaker stand features a natural solid oak base panel which helps minimize mechanical resonance and a 50.8mm centrally located tube that can be mass loaded to help tune the supported speakers.

Bringing value and adaptability to speaker stand design, the NeXXus Essential, HiFi Audio, CM (Cable Management) and Pro Studio specifications are available in a range of height options while offering an extensive range of top plate upgrades. NeXXus makes an excellent choice as it can support a wide range of popular speaker sizes. As with all Atacama speaker stands, performance can easily be tuned to the supported speakers sonic characteristics by increasing overall mass by part filling the twin columns with Atabites.

The SLX and Audition Series are professional quality stands which caters for larger bookshelf speakers where an increase in the base-plate footprint is required to ensure optimum stability. With a wide choice of heights options, these heavy-duty speaker stands are available in two colours and feature the new high-load trapezoidal gel pads as standard. SLX can except top spikes if preferred (cost option).

The HMS (high Mass Stand) Series is the audiophiles choice, incorporating a significant increase in mass loading capacity and designed with very high-quality speakers in mind. With over sized tubes and precision carbon steel laser cut top plates, the HMS speaker stand represent the pinnacle of an all metal design.

Moseco and Moseco XL Series are the designer models in the Atacama range, using both acoustic and environmentally friendly Bamboo to enhance the listening experience. Moseco has been awarded both 5 stars and BEST SPEAKER STANDS all the way through from 2014 to 2022 in What Hi-Fi? Sound & Vision magazine, so don't just take our word for it!

Centre Channel speakers require dedicated stands as they tend to be of unconventional dimensions. The Moseco CC Series provides that solution and are available in a wide range of height, colour and bamboo finish options. Want a all steel centre channel speaker stand? The new Ensign series may be just what you are looking for.

All Atacama speaker stands are supplied with isolation spikes as standard on the base plates/panels (do not worry if you have delicate floor coverings, just be sure to include spike shoes which will protect your floor) and can be mass loaded with Atabites designed to help tune your speakers to match the room acoustics.

NeXXus Series

With over 200 different combinations of height, colour, specification and top plate sizes, NeXXus brings maximum adaptability to meet your speaker support requirements!

Essential specification, offering great value, these stands are ideal for small to medium sized bookshelf speakers or surround sound applications.

Each stand features:-

2 x 50.8mm (2") vertical tubes

Can support speakers up to 15kg (33.06 lbs)

Domed top plate gel pads

Maximum Atabite filler capacity (600 version example per pair) 16.8kg (37 lbs)

NeXXus 500 Essential
Diamond White Finish

HiFi Audio specification, perfect for the experienced hifi enthusiast with medium to high end hifi equipment looking to maximize domestic speaker performance as well as offering a practical, stable speaker support.

Each stand features:-

1 x 76.2mm (3") & 1 x 50.8mm (2"), vertical tubes

Can support speakers up to 22.5kg (49.06 lbs)

Domed top plate gel pads

Maximum Atabite filler capacity (600 version example per pair) 29.65kg (65.3 lbs)

NeXXus 600 HiFi Audio
Satin Black Finish

CM specification, with cable management and a mass loading capacity greater than Essential specification, these stands offer both performance and practicality.

Each stand features:-

1 x 76.2mm (3") & 1 x 50.8mm (2") with cable management, vertical tubes

Can support speakers up to 22.5kg (49.06 lbs)

Domed top plate gel pads

Maximum Atabite filler capacity (600 version example per pair) 21.25kg (48.8 lbs)

NeXXus 600 CM
Satin Black Finish

Pro Studio specification, for when only the best will do! Designed for professional studio applications, high end audiophile speakers or when active monitor speakers need supporting.

Each stand features:-

2 x 76.2mm (3") vertical tubes

Can support speakers up to 30kg (66.12 lbs)

High load trapezoidal gel pads

Maximum Atabite filler capacity (600 version example per pair) 42.5kg (93.7 lbs)

Accessories

Atacama Spike Shoes HD-S and HD-L

All Atacama speaker stands use spikes on the base plates to aid isolation. To protect delicate floor coverings spike shoes are recommended. Two sizes are available (20mm and 25mm diameter) in either a Satin Black or Nickel finish and are supplied as a pack of 4. A set of Neoprene pads are also included to act as a barrier between the shoes and the floor if added protection is required.

Atacama HD-S 20mm Spike Shoes

Atacama HD-L 25mm Spike Shoes

Atacama Isolation Gel Pads

Isolation Gel Pads are designed to adhere to speaker stand top plates to act as a protective barrier between the top plate and the speaker cabinet. They are made from a high performance polyurethane elastomer which, as well as being non-slip and non-scratch, help dampen sound and vibration resistance. Available in gloss black finish.

Accessories

Atacama Mass Loading Plates

Designed to fit NeXXus and the Moseco range, the Mass Loading Base Plate pack adds 1.5 kg to each stand increasing the sound dampening and improving the stability of each support.

Mass Loading Plates are made in the UK from Carbon Steel and comes painted in Satin Black.

Supplied as a Pair.

Please note- The shape may vary from the image as the Mass Loading Plate pack is adapted to fit different models of speaker stand.

Atacama Top Plate Spike Pack

Designed to fit Atacama SL and SLX Series speaker stands for when even more isolation than the supplied Gel Pads are required, each pack contains 8 6mm top spikes and fittings along with a hex key to aid adjustment.

Atacama Base Plate Spike Packs

All Atacama speaker stands come with spikes as standard, however should replacements be required they are available in packs of 8 6mm or 8mm diameter sizes and include locking nuts.

Accessories

Atacama Atabites SMD 7.0 HD Speaker Stand Mass Loading Filler

Maximum Atabite capacity
per pair* of speaker stands

How much do you need?

To get the best possible performance from your speaker stands, it is recommended that the main vertical columns are partially filled with a high density inert filler.

By adding Atabites, you will reduce stand ringing and give a tune-able platform from which to set up your bookshelf speakers.

The amount of filler to use will depend on the speakers, cables, speaker positioning, hifi component match, room acoustics and what sonic characteristics the listener is looking for.

The more Atabites used, the more depth of bass, detail and defined sound stage should be heard.

However, overfilling can dull the stands causing detail and mid-range to soften, so experiment with the amount used to match the speaker stands to your specific requirements.

As a general rule, half to two thirds full gives the best results.

Featuring new zinc coated steel micro-discs, the Atabite SMD-Z 7HD inert filler has a range of particulate sizes giving consistent sonic performance. The Zinc coating adds mass, protects the filler from both oxidization and degradation while enhancing the visual aesthetics.

PLEASE NOTE- Atabites are supplied by weight, not volume. (7 kg tubs). Some settling of contents may occur in transit.

As a guide, each 1.8L tub contains approximately 1.6L of Atabites. As a comparison, 1.6L of typical dry *beach sand would weigh less than 2.5kg
